Application Idea Summary

Our application, MusicWe, is a music-focused web platform designed to allow users to explore songs, artists, and playlists while interacting with other users. The system supports a community-driven environment where users can create playlists, leave comments, and engage with shared music content

Key features

The Minimum Viable Product includes:

- User registration and login
- Songs and artist pages
- Playlist creation and viewing
- Comment system
- Search functionality
- Rating system

Ethical issues

Ethical Issue	Description	Impact on Application	How it is Addressed in Code
User Data Privacy	The application stores user login details and profile information. This data must be protected.	Risk of data breaches and loss of user trust if exposed.	Implemented through login and registration routes with validation. Sensitive data is handled via backend and not exposed on frontend pages.
User-Generated Content	Users can post comments on songs, which may include inappropriate content.	Could create a negative or unsafe user environment.	Comment system is controlled through server routes. Users must be logged in to post, and options like delete/edit

			(seen in UI) allow content control.
Data Accuracy	Song and artist data should be correct and consistent.	Incorrect data reduces reliability of the platform.	Data is retrieved directly from the MySQL database using structured queries, ensuring consistent and centralised data handling.
Fair Use of Content	Music-related data and images must be used responsibly.	Risk of copyright or misuse of content.	The application uses stored data within its own database rather than scraping or illegally sourcing content. Content is managed within the system.
User Interaction Behaviour	Users interact through comments and shared playlists.	Offensive behaviour can harm the community experience.	Features such as comment replies, delete options, and user accounts allow basic moderation and accountability within the platform.

User Stories

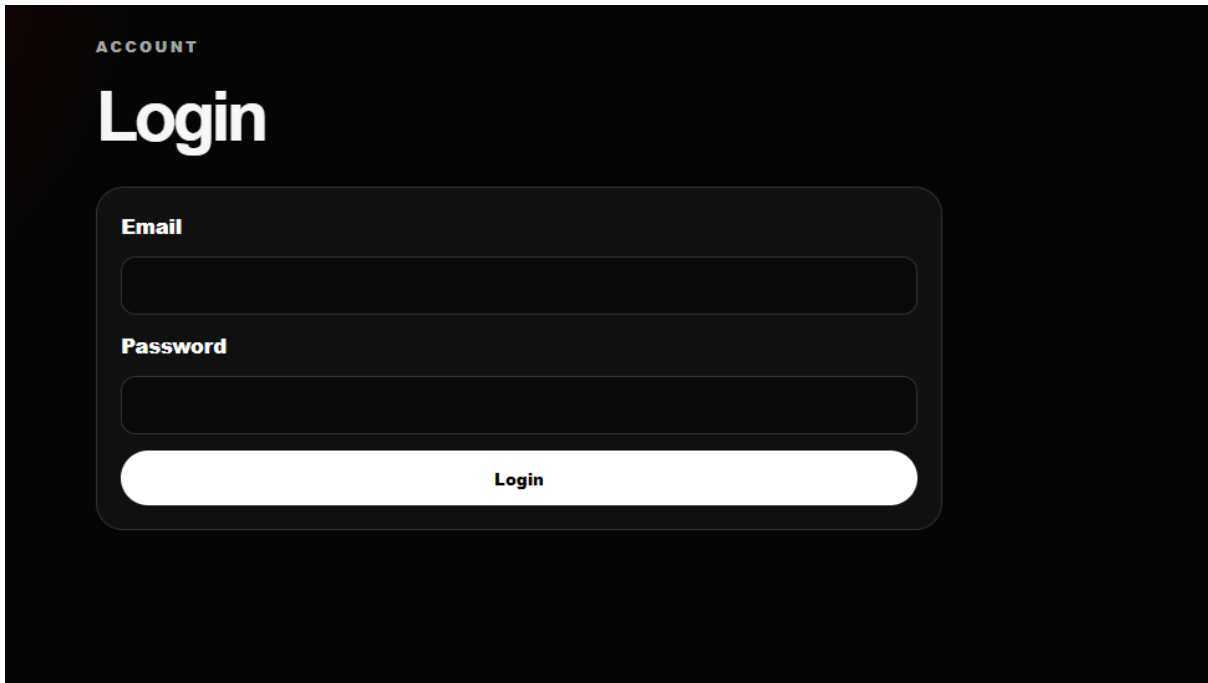

The following user stories were implemented during Sprint 4:

- As a user, I want to register and log into the system so that I can access personalised features.
- As a user, I want to view songs and artists so that I can explore music content.
- As a user, I want to view detailed information about a song or artist so that I can learn more about them.
- As a user, I want to search for songs or artists so that I can quickly find specific content.
- As a user, I want to create and manage playlists so that I can organise my favourite music.
- As a user, I want to view playlists created by myself or others so that I can discover new music.

- As a user, I want to leave comments so that I can interact with other users and share opinions.
- As a user, I want to edit my profile so that I can update my personal information.
- As a user, I want to view other user profiles so that I can explore their activity.
- As a user, I want to reply to comments so that I can have discussions with other users.
